

# The "Go Green" Scramble

Learn how helping the earth can make you money too!  
Use the word bank & clues below to complete this word scramble.

## Scramble Clues

- \_\_\_\_\_ (investing) is using your money to try to make more money.
- Your \_\_\_\_\_ (principal) is the money that you invest originally.
- Your \_\_\_\_\_ (return) on an investment is the money you make above and beyond your principal.
- Your \_\_\_\_\_ (rate) of return is your return on your investment over a certain period of time. This means how much money you made on the money that you originally invested in a certain length of time.
- The greater the rate of return, the more \_\_\_\_\_ (quickly) you can make money.
- For a family, business or community, purchasing a \_\_\_\_\_ (green) technology can be an investment.
- Green technologies help the \_\_\_\_\_ (environment).
- Green technologies often save \_\_\_\_\_ (money) over the long-term.
- Remember, for a family, business or community, a penny saved is a penny \_\_\_\_\_ (earned).
- Let's look at a business. For a business, profits are counted by taking the money the business has earned (revenue) and subtracting the business \_\_\_\_\_ (costs).
- Some costs that may be reduced by using green technologies are \_\_\_\_\_ (energy) costs such as gas or electricity.
- Again, if a business reduces its costs and keeps the same level of revenue, its \_\_\_\_\_ (profits) will increase, which means it is making more money.
- If a family, business or community, invests in a green technology and gets a quick return on their investment by greatly reducing their costs, so that they have paid for the \_\_\_\_\_ (technology) and are now saving additional money, they will have a high rate of return.

environment  
technology

## DID YOU KNOW?

RECYCLING  
saves energy!

Because of the extra energy that would have been needed to produce NEW cans, recycling 40 aluminum cans saves 1 gallon of gasoline.

In 2006, recycling aluminum cans saved 15 million barrels of oil! (The Aluminum Association, 2007)
